

ArauCare Benchmark Report

This benchmark is framed within the UX Elements, situated specifically in the Strategy and Scope planes.

- **Strategy Plane:** Through research of direct, analogous and reference tools, the analysis takes into account the needs of the end user and the strategic objectives of the ArauCaria application. This allows identifying current gaps and problems in the management of hours and care at the CESFAM, defining the differential value of our proposal.
- **Scope Plane:** Based on the benchmark findings, the functionalities and content of the application are determined. The characteristics identified in this document delimit which features will be part of the solution and which were omitted or left out.

1. Synthetic Comparative Table

Dimension	miRedSalud (Direct)	ChileAtiende Virtual Branch (Analogous)	Google Calendar (Reference)	ArauCare Proposal
User Profile	Patients of the private system or health agreements.	Chilean citizens needing to carry out state procedures, pensions, and certificates.	General public needing to organize their time and commitments.	Patients with reduced mobility and caregivers in La Araucanía.
Navigation	Bottom navigation bar with 5 icons.	Central search engine, left side panel, card dashboard (private).	Side menu, floating button.	Simplified bottom nav, floating button for main action.
Interoperability	Requires own registration with RUT.	Full integration with ClaveÚnica and government databases.	Native integration with Google accounts.	Integrated login with ClaveÚnica and FONASA tier validation.
Caregiver Support	Allows managing medical information of family members.	Shows detailed family group (RSH) with roles.	Allows sharing complete calendars.	Shared patient-caregiver profile with management delegation.
Accessibility	Legible texts, but no manual screen controls.	Fixed buttons in the header to increase/decrease font size and contrast mode.	Native voice support and adaptation to system dark mode.	Manual accessibility buttons on screen and voice reading.
Empty States	Shows generic 'no appointments' message.	Explains why there is no data and offers an alternative action button.	Shows timeslots when there is no event on the day.	Clearly explains to the patient the steps to follow if there are no referrals.

2. Feature Map

Selection Rationale: MiRedSalud

Included because it addresses the problem of scheduling and displaying diagnostics in the Chilean health context. Its analysis helps understand how users in Chile interact with these services.

Base Dimensions — MiRedSalud

Dimension	Record / Observation
Identification	Name: MiRedSalud. Platforms: App Store (iOS), Google Play (Android) and Web. Version: 1.3.4 Date of analysis: May 12, 2026.
User Profile	Patients of the private system or health agreements seeking agility. Covers from young people to adults who want to manage their health, or that of their family, digitally.
Value Proposition	Offers a comprehensive solution for scheduling medical appointments, viewing exam results and managing quotes within a private network.
Main Features	1. Save, review and download orders, medical prescriptions, exam results and more from your phone. 2. Quote RedSalud services. 3. Schedule or modify appointments easily. 4. Track preventive health check-ups 5. Manage the medical information of loved ones or family members.

Onboarding Flow	User registers with RUT and date of birth → email is verified → digital signature validates identity and terms are accepted → personal and contact data added → secure password created → access to patient portal with main features.
Navigation Patterns	Bottom Navigation Bar with 5 icons: Home, Appointments, Schedule, Quote and Menu. Home provides access to orders, prescriptions, exams, family management and hospitalization via horizontal buttons. Appointments keeps a record of past, upcoming and cancelled appointments. Schedule has a booking depth of 5 levels. Quote has a depth of 4 levels. Menu contains account data.
Visual Design	Colors: Blue in headers and navigation. White background. Soft grays to highlight unused buttons. Conveys trust and readability. Typography: Sans-serif for legibility. Highlighted buttons for urgency. Iconography: Simple and consistent icons matching the services offered.
Accessibility	1. Text size: Large titles, differentiated subtitles, adequate main text size. 2. Color contrast: Gray contrast on buttons; white background with dark/blue text facilitates reading. 3. Icon labels: Most relevant icons accompanied by text labels. 4. Voice support: No visible voice support in the application. 5. Dark mode: No visible or configurable dark mode. 6. Touch element size: Good tactile interaction on mobile.
Notable Aspects	Home Screen - doctor's appointment - Type of medical care  The first screenshot shows the home screen with a greeting '¡Hola Marco Andrés!', a 'Sin citas próximas' (No upcoming appointments) message, and a 'Mis accesos' (My access) section with icons for 'Órdenes', 'Recetas', 'Exámenes', 'Gestión familiar', and 'Hospitalizaciones'. The second screenshot shows a list of appointments with details like date, time, location, and status. The third screenshot shows a list of services to schedule, including 'Consultas', 'Dental', 'Imágenes y Procedimientos', 'Telemedicina', 'Kinesiología', 'Laboratorio y Toma de Muestras', 'Vacunatorio', 'Toma de muestras a domicilio', 'Educación en Salud', and 'Donación de Sangre'. 1. Home screen with all important accesses and a summary of scheduled appointments. 2. Consultation types and the app in general feature icons that facilitate understanding. 3. Appointment window shows a summary with date, time, location, specialist and attendance status — only useful information shown.

Too many fields and technical terms confuse the user. Violates Nielsen's Heuristic that the system must speak the user's language.

Domain-Specific Dimensions — MiRedSalud

Custom Dimension	Why it is relevant to your project
Personalization of alerts and preventive reminders	The system displays appointment data on the home screen but lacks a dynamic alert configuration system. It does not emit automatic notifications for last-minute schedule changes or proactive health alerts, forcing the user to constantly open the app.
Support for caregiver or family management/visualization	Allows adding family members and viewing their medical information under one profile, but does not distinguish roles between patient and caregiver. A caregiver can view a family member's data but there are no differentiated permissions or patient confirmation to authorize access.
Access and visualization of associated digital documents	Provides a dedicated section for managing clinical documents, allowing medical prescriptions, service orders and exam results to be stored, reviewed and downloaded directly on the mobile device.

Selection Rationale: Mi ChileAtiende

Included because it addresses the problem of completing procedures and waiting in physical queues, with a focus on people with reduced mobility. It helps understand how the Chilean State structures accessibility, navigation and citizen language in mass digital platforms.

Base Dimensions — Mi ChileAtiende

Dimension	Record / Observation
Identification	Name: Mi ChileAtiende. Platform: Web (PWA adaptable to mobile). Date of analysis: May 12, 2026.
User Profile	Chilean citizens who need to carry out state procedures, obtain certificates or consult benefits. Generally focused on the elderly, retirees and people with disabilities.
Value Proposition	To provide relevant information from different public institutions in a single, close and easy digital space, avoiding physical queues.
Main Features	1. Quick search and retrieval of certificates (birth, background, etc.). 2. Access to the Social Household Registry (RSH) record and socioeconomic rating. 3. Consultation of IPS social payment dates and amounts. 4. Access to pension information (AFP and Social Security). 5. Permanent manual accessibility panel.
Onboarding Flow	The user freely navigates the public section. When requiring a procedure or entering their profile, they are redirected to a government gateway to log in with their RUT and ClaveÚnica. After validation, they go directly to the personalized dashboard.
Navigation Patterns	Main navigation (logged in): persistent Left Side Panel on high-resolution screens, hamburger menu on mobiles. Central content organized in large Cards for quick access. Depth level is low.

Visual Design	Minimalist design. White background and institutional colors (blue and red) for structuring. Sans-serif typography, high weight and good size to facilitate reading. Monochromatic iconography within cards.
Accessibility	Includes fixed A+ and A- buttons to scale text and a high-contrast button. Avoids bureaucratic technicalities. Navigation cards have adequate size for mobile interaction.
Notable Aspects	Manual Accessibility: ChileAtiende integrates direct font size and contrast controls, critical for patients with reduced vision who do not know how to configure their phone's internal accessibility settings. Applies the Inclusive Design Principle and Nielsen's user control and freedom heuristic. The screenshot shows the 'Principal Dashboard' of ChileAtiende. At the top, there's a header with the logo, font size controls (A+, A-), a high-contrast button, and a user profile dropdown. The main content area is divided into several sections: a welcome message, a list of quick access links (Mis accesos), a section for activating CasillaÚnica, and a grid of service cards (Mi perfil, Mi Registro Social de Hogares, Mis pagos de beneficios sociales, Mis capacitaciones, Mi información previsional, Mi Seguro Social). A footer section promotes the Ventanilla Única Social. Official Data Dashboard: Applies Miller's Law by centralizing valuable information, giving the user a complete view of their state situation without navigating multiple portals. Empty State Management: When there are no records, the system delivers explanatory text and an external action button, reducing user uncertainty.
Areas for Improvement	Fragmentation by redirection: Pressing buttons like 'Get record' or 'Go to SENCE website' expels the user from ChileAtiende to external websites with inconsistent accessibility and design standards, violating Nielsen's Consistency and Standards Heuristic.

2. **Visual overload:** Before logging in, the number of sections can generate visual fatigue for an elderly user looking for one specific function — excessive cognitive load, violating the aesthetic and minimalist design heuristic.

Domain-Specific Dimensions — MiChileAtiende

Custom Dimension	Why it is relevant to your project
Personalization of alerts and preventive reminders	The website has a 'single mailbox' system that centralizes notifications from multiple official institutions and sends email alerts when new information is available. This centralized method is a feature that can be implemented in ArauCare.
Support for caregiver or family management/visualization	The system shows the complete family group through the RSH with differentiated roles (head of household, members). However, there is no caregiver function that manages procedures on behalf of a family member without that member being present — an opportunity for ArauCare.
Access and visualization of associated digital documents	The platform has an email alert system where documents can be attached (procedure results, resolutions, IPS benefits). ArauCare's intention is to access these documents directly from within the app, not on external platforms.

Selection Rationale: Google Calendar

This application is used as a design reference because it establishes a relevant standard for agenda and reminder management without directly competing in the health area. The goal is to adopt established UI patterns from scheduling systems to facilitate understanding of the application.

Base Dimensions — Google Calendar

Dimension	Record / Observation
Identification	Name: Google Calendar. Platforms: App Store (iOS), Google Play (Android) and Web. Version: 2026.17.0-909654459-release Date of analysis: May 12, 2026.
User Profile	Aimed at the general public (adults and young people) who want to organize their day-to-day activities.
Value Proposition	Solves difficulty in organizing personal time, forgetting commitments or fragmentation of agendas across devices. Its value lies in real-time synchronization, automatic event creation and preventive notifications.
Main Features	- Automatically add events from Gmail. - Keep family, friends and colleagues updated with shared calendars. - Create and manage tasks and events. - Access a task list and organize them in a full-screen view. - Compatibility with other Google Workspace services.
Onboarding Flow	1. User logs in with their Google account email and password. 2. They can immediately add, delete and modify events and view them in different ways.
Navigation Patterns	Main pattern: Monthly calendar shown on entry. Tapping a day or the Floating Action Button (FAB, bottom right) opens a form to create an event (title, type, duration, guests, video conference, location, notification, color, description, attachment). Save is top right; X opens a discard/continue overlay. Secondary pattern: A drawer (top right icon) lets the user switch between day, 3-day, week and month views, or open an agenda list.

Visual Design	Predominantly black base with vibrant colors to categorize and highlight events. Sans-serif fonts for readability on small screens. Minimalist and standard iconography (+ to add events, Triple Bar for side panel). Clean design with minimal icons, avoiding overload without large empty spaces.
Accessibility	Sans-serif fonts with correct text size for readability. Neutral color palette for the background (white and gray for night mode) with vibrant colors for events. Key elements like the FAB and calendar cells have a wide contact area.
Notable Aspects	Meets the aesthetic and minimalist design heuristic by containing only relevant information, reducing cognitive load. Main screen  Icons: Applies recognition before recall with clear iconography for quick identification of main actions. Contrast: Correctly uses Visual Hierarchy and contrast — events stand out over the neutral background, guiding user attention. Meets the flexibility and efficiency of use heuristic by automating event field completion through Gmail integration. Gmail  Event fields 

Areas for Improvement

Main screen

Two icons in the top right lack visual labels or clear metaphors (e.g., the 'return to today' button), forcing the user to guess or learn by trial and error — violating the recognition before recall principle.

Help and comments

Does not correctly apply the Help and Documentation Heuristic: the system lacks an initial tutorial and the integrated help base does not provide concise answers to specific user questions.

Violates the consistency and standards heuristic by lacking conventional **section titles** and relying on separator lines that break the Gestalt Law of Proximity by performing an **unnecessary category separation**. A **left indentation** with no apparent functionality also violates the aesthetic and minimalist design heuristic.

Domain-Specific Dimensions — Google Calendar

Custom Dimension	Why it is relevant to your project
Personalization of alerts and preventive reminders	One of its most notable sections. Event configuration allows a customizable notification that can alert the user minutes, hours, days or even weeks before an event. This system is very useful for ArauCare and many of its features can be implemented in the project.
Support for caregiver or family management/visualization	Through shared calendars, a user can share an event or their entire calendar with a third party. However, roles are symmetrical. For ArauCare, this is a useful reference for implementing shared visibility, though insufficient in terms of privacy controls.
Access and visualization of associated digital documents	Each event can have a document attached. A key value for ArauCare is the ability to automatically attach documents to events upon receiving an email — the target user can know what documents they need for an appointment without entering them manually.

Cross-Domain Dimension Reference Table

Custom Dimension	What to Observe / Record	Why it is Relevant to the Project
Personalization of alerts and preventive reminders	Does it contain an alert or reminder system to notify the user of relevant events?	Allows the patient to receive early notifications about their appointment status. This avoids unnecessary trips to the CESFAM, critical for users in rural areas or with reduced mobility.
Support for caregiver or family management/visualization	Does it allow management or interaction with a third-party profile (e.g. a child managing an elderly parent's appointment)?	Many patients with reduced mobility or chronic conditions in La Araucanía are elderly people who depend on a family member (caregiver) to use technology and schedule their CESFAM appointments.
Access and visualization of associated digital documents	Does it allow digital document review?	The chronic patient needs to view current medical prescriptions, referrals or results without physically traveling to the CESFAM, reducing waiting times and the risk of losing documents.

3. Findings and Design Decisions

Following the comparative analysis of the three tools, the strategic pillars for the design of ArauCare have been defined. The findings focus on reducing cognitive load and ensuring that health logistics are efficient for patients in rural areas.

3.1 Adoptions

- **Manual Accessibility Controls:** From Mi ChileAtiende, the inclusion of permanent buttons for font scaling and high-contrast mode in the header is adopted. This is important for the elderly audience who do not usually configure accessibility from their phone's internal settings.
- **Preventive Alert System:** Google Calendar's model for configuring multiple reminders is taken as the standard. This pattern will be adapted to notify the patient not only of their appointment time, but also of last-minute changes in the doctor's schedule or pharmacy stock availability, avoiding unnecessary trips.
- **Integrated Authentication:** Following the ChileAtiende model, ArauCare will use ClaveÚnica to automatically validate the user's identity and FONASA tier. This reduces registration friction and ensures interoperability with official state data.
- **Shared Profile Management:** Based on miRedSalud's family management and Google Calendar's shared calendar usage, a 'caregiver' profile will be implemented, allowing a family member to manage procedures and receive alerts on behalf of the patient.

3.2 Points to Avoid

- **Complex Technical Terminology:** The use of dense clinical language observed in miRedSalud is rejected. ArauCare will use 'Citizen Language', simplifying specialty and procedure names to facilitate navigation.
- **Redirection to External Sites:** Unlike ChileAtiende, where the user is expelled from the application to complete procedures on other ministerial portals, ArauCare will maintain a centralized experience. Fragmentation will be avoided to prevent user disorientation.
- **High-Depth Navigation:** Flows of more than 3 clicks for critical tasks detected in direct competitors are rejected. A 'card dashboard' with quick access will be prioritized so that prescription and appointment features are always on the main screen.
